arXiv moderation

arXiv is a forum for professional members of the scientific community, providing rapid distribution of new research. As part of the service all submissions are subject to moderation. Material submitted to arXiv is expected to be self-contained and of interest, relevance, and value to the disciplines we serve.

Please note that the arXiv moderation process is not a peer-review process. arXiv staff and moderators cannot give feedback on the submission.

What policies guide moderation before public announcement?

The moderation process primarily occurs after a user submits a work and before the work is made public. Each work is evaluated based on its content. arXiv moderation decisions may be influenced by the publication status of the submission, but prior publication does not guarantee acceptance in arXiv. Submitters who have had works previously delayed or declined by arXiv should anticipate closer scrutiny on future submissions. In some cases, authors may be required to establish a conventional publication record and limit their submissions to works that are published in conventional journals. arXiv reserves the right to reclassify or decline any submission.

Reclassification of works

Reclassification by our moderators ensures that submissions are posted to the most [relevant category](#). Cross-lists may be added to other related categories, or they may be removed by moderators when the classification is deemed inappropriate. A submission that is cross-listed to a category will be announced in the mailings to that category.

Declined submissions

arXiv, in its sole discretion, may decline to post works submitted to the platform. The following list includes example topics that could lead to a submission being declined. This is not an exhaustive list, and some works that have been published or accepted by a journal may still be declined at arXiv's discretion.

Scholarly Standards

Submissions to arXiv must comply with appropriate standards of scholarly communication in form, including appropriate and carefully prepared sections, figures, tables, references, etc. Language standards require professional communication, and sufficiently neutral tone (see also [Code of Conduct](#)). General scrupulousness and care of preparation are required.

Scholarly interest

arXiv moderators expect submissions to be of scholarly archival interest to the communities they represent. A submission may be declined if the moderators determine it lacks originality, novelty, significance, and/or contains falsified, plagiarized content or serious misrepresentations of data, affiliation, or content. Submissions should focus entirely on the scientific research and avoid extraneous personal or political statements.

Submissions that do not contain original or substantive research, including course projects, research proposals, news, or information about political causes (even those

with potential special interest to the academic community) may be declined. Submissions in need of significant review and revision may also be declined.

Content types

Research articles are the primary content-type submitted to arXiv.

For information about submissions other than research articles please see the [specific content type policies](#)

Format requirements

For information about submission format requirements please see [specific format requirements](#)

IMAGES

Authors should be aware that the use of some images may cause offense. Examples include: obscenity; sexualized images; and images of violence or its results. There are more complex examples: images with checkered histories, (including the “Lena” image — a crop from an image published in a magazine that specialized in female nudes); politically controversial images; covertly sexual images; and the like. The use of essentially any image can be justified by appropriate circumstances, but authors should think carefully about what images they use. Papers that are identified as using images likely to cause egregious offense may be declined or removed.

POLICY FOR AUTHORS’ USE OF GENERATIVE AI LANGUAGE TOOLS

arXiv recognizes that authors of scientific works use a variety of tools to do the science on which they report, and to prepare the report itself, from simple ones to very sophisticated ones. Community opinion on the appropriateness of such tools may be varied and evolving; AI powered language tools have in particular led to significant debate. We note that tools may generate useful and helpful results, but also errors or misleading results; therefore, knowing which tools were used is relevant to evaluating and interpreting scientific works.

In view of this, we:

1. continue to require authors to report in their work any significant use of sophisticated tools, such as instruments and software; we now include in particular text-to-text generative AI among those that should be reported consistent with subject standards for methodology.
2. remind all colleagues that by signing their name as an author of a paper, they each individually take full responsibility for all its contents, irrespective of how the contents were generated. If generative AI language tools generate inappropriate language, plagiarized content, biased content, errors, mistakes, incorrect references, or misleading content, and that output is included in scientific works, it is the responsibility of the author(s).
3. generative AI language tools should not be listed as an author; instead authors should refer to (1).

On a topic not covered, or a community not currently served

While arXiv serves a variety of scientific communities, not all subjects are currently covered. Submissions may be declined if they do not fit into our current classification scheme or we do not currently serve the community who is the intended audience.

Duplicated content

If we notice that an author has made multiple similar submissions, or that a new submission appears to be a revision of a recent submission, we may request that the submissions be consolidated or versioned.

Rights to submit material

Submissions to arXiv must be the author's original work, and/or submitters must have the legal authority to grant the [selected license](#). Authors must ensure the submission does not, to the best of their knowledge, infringe upon anyone's copyright. arXiv does

not accept work containing verbatim comments by referees, plagiarized content, or other works barred by third party copyright.

Excessive submission rate

Articles submitted to arXiv must be of original, novel, and significant self-contained research. There is a practical limit to the rate at which appropriate, independent submissions can be produced by any one person. We may request that a particular author limit their submission rate.

If an author has a back catalog of work to submit to arXiv, we ask that they submit no more than three papers per day.

What policies guide moderation after public announcement?

Once a paper is announced it becomes part of the permanent scholarly record. arXiv will only consider requests for removal if the submitter did not have the legal right to agree to the license.

In cases where public papers are found to violate arXiv policy, we may [withdraw the paper](#). arXiv may also indicate the concern in the Comments metadata.

arXiv reserves the right to decline or remove any content. arXiv may reclassify already announced papers if the moderators determine there is a more appropriate category.

Can I appeal a moderation decision?

It is possible to appeal the classification of an announced article or the decision to decline a submission. In some cases, we may require that a paper be accepted for publication in a conventional journal before an appeal is considered. Note that some works that have been published or accepted by a journal may still be declined at arXiv's discretion.

If you disagree with a moderation decision, you may appeal. Please be sure to carefully [read through the appeals process](#) to ensure your request is fully considered. Please note that decisions upon [appeal are final](#), and that no feedback will be provided with the decision.

Who are arXiv moderators?

arXiv moderators are volunteer subject matter experts with terminal degrees in their field. They evaluate each submission's content and category, following arXiv policies. [arXiv moderators](#) are approved by their discipline-level [advisory committees](#) and by arXiv staff.

Moderation is a professional responsibility. Moderators consider the submissions to arXiv as privileged information, as they would with a paper being refereed for a journal. We respect the confidentiality of the process and refrain from sharing information gathered during submission review.

Although the moderators may be publicly acknowledged, it is inappropriate to contact any moderator directly regarding your submission. All communication between authors and moderators or about moderation decisions must be addressed through our [user support portal](#) or to moderation@arxiv.org. Unusual cases may be addressed to the Chair of the appropriate Section Editorial Committee by raising a ticket in our [user support portal](#) and indicating that it should go to the Section Chair. Section chairs will seldom override a moderator on content judgment but will review procedural issues.
